

Welcome to Career Options

Your career choice is one of the most important decisions you will make in your life. The Career Options report is a valuable tool for starting, changing, and developing your career. It measures 175 factors including your task preferences, motivations, work environment preferences, interests, and interpersonal preferences. The system compares your preferences to the requirements of more than 681 career options to determine the careers you are most likely to enjoy. Please note this is an assessment of Suitability (how likely you are to enjoy a particular career). It is not an assessment of your education, experience, or ability to perform specific tasks. You will need to consider these factors separately.

Instructions

The Career Options report is designed to provide you with more information so you can make more informed decisions about your future. Use the information below to help you validate your initial thoughts and investigate career options you may not have previously considered.

Your careers are listed in order of your career satisfaction or suitability. The Career Satisfaction scores are to the right of each career in percentages. The highest possible score is 100%. A score of 80 or greater indicates this career is likely a good match for your preferences and that it is worth investigating further. However, don't decide on a career just because it has a high score. You also need to review job descriptions, educational requirements, future prospects for employment and other relevant details to see if it meets your requirements.

It is a good idea to short list the careers that you want to learn more about. You can then generate a Career Enjoyment Analysis report to look into the specific tasks and traits required for that career to get a deeper understanding of what you will and will not enjoy about it.

Success & Happiness

Our research has shown that people who enjoy at least 75% of the main tasks of their job are three times more likely to be successful in that job. Performance Enjoyment Theory states very simply that the more we enjoy a task, the more we perform it and consequently the better we get at it. When you think about your career choice in this way you realize that enjoying your career is not only important for your happiness, it is vitally important for your success.

Are the scores reliable?

The system checks to see if the answers were completed honestly and while paying sufficient attention. Analysis indicates there is a high likelihood the answers were truthful, accurately self-aware, and completed with sufficient concentration.

The scores related to each career are intended to point you in the right direction while exploring your career choices. A high score doesn't mean that you should select that career. Rather, it means you would probably enjoy most of the tasks, subjects, and interactions that are typically related to that career. However, there may be specific jobs within a career that are somewhat different and thus, in some cases, you might find a job that you like within a career that scores low, or you might not prefer a specific job within a career where you score high. However, by understanding your preferences related to a career, you are in a better position to ask the right questions related to a specific job.

Next steps

Career suitability is a good starting place to explore your career but you also need to consider other factors such as educational requirements, likelihood of being selected, career development opportunities, and pay scales.

Get as much information about your short-listed careers as possible. You can speak with a Career Counsellor or School Guidance Counsellor in addition to looking up the career and reading about it on the internet. If you know someone who works in that career, call them and ask if they wouldn't mind discussing it with you.

Most people will be more than happy to help you. You could also contract a related professional organization or call employers who have advertised job openings for this career.

For further information about salaries, availability, training and career descriptions, use an internet search engine to discover more careers in your country. For example, you can find the United States government publication of the Occupational Outlook Handbook online at <http://www.bls.gov/ooh> or you can explore the home site on <http://www.bls.gov>. You can also find the Occupational Outlook Handbook at your local library.

Remember only you know what truly appeals to you. The Career Navigator can provide valuable insight and information, but as always the final decision is yours. Good luck!
